Messaging

Enable efficient and reliable real-time communication with your drivers.

Stay in permanent contact with your drivers and communicate with them at any time. Use the tool to deal with the unexpected. Send messages to your drivers in a few clicks from Co-Driver Weboffice or directly from your usual mailing system (e.g. Outlook). The driver receives the messages instantly in the cabin on a fixed screen, a smartphone or on a tablet. Notified by an alert, the driver can send an answer immediately. The messaging system becomes a tool that makes your life easy:

- Include address to a destination in a message through one click on the map. The driver will then be able to directly launch the navigation to easily reach his destination.
- Configure up to 4 predefined answers to your messages and your drivers will be able to answer in just one click.

- Save time using recipients lists or copying messages.
- Quick overview with time stamps of when a message was sent, delivered and read.

Access to the history of messages and see if it has been delivered or read.

You can send messages both to drivers and to vehicles and configure how long time each message should be kept in the inbox.

Send messages easily to a driver or a group of drivers.

Benefits

- Be more reactive with real-time communication with your drivers.
- Your drivers never miss any message thanks to notifications. Copy messages or use predefined answers to save time.
- Ensure an always reliable and archived exchange of information. Get a better insight of your activities thanks to preci se feedbacks from your drivers.
- Use your usual mailbox through mail forwarding.
- Access the complete history of your messages.

A notification warns the driver that a new message has arrived.

Required Equipment*

- An in-cab interface is necessary to send messages to drivers.
- Use Co-Driver App by AddSecure or Vision Fixed or Vision Mobile by AddSecure in combination with Roadbox by AddSecure

*For more information, please refer to our product data sheets.
